

Today's cyber compliance process isn't scaling

Dammit Jim,
I'm a developer
not a FISMA expert!

Maintaining written documentation is too slow

- Open Source – continuous procurement
- Agile – continuous dev/ship cycles
- Cloud – continuous scaling
- DevOps - deployment

Interpreting 800-53 controls takes too long

“SC-7 BOUNDARY PROTECTION - The information system connects to external networks or information systems only through managed interfaces consisting of boundary protection devices arranged in accordance with an organizational security architecture.”

Consultant-required costs are too high

- \$100K - \$150K per system ATO (Authority to Operate)
- 9 months on average per system ATO
- \$13B+ annual Federal spending on FISMA
